Assignment 2: Employee Registration and Document Upload System

Course: PHP Web Development

Chapters: Chapter 3 (PHP Functions) and Chapter 4 (Forms, Validation and File Uploading)

Duration: 2 Hours and 30 Minutes

Total Marks: 5

Assignment Type: Individual Practical Assignment

Task 1: Employee Registration Form

Create index.html with the following fields:

Field	Input Type
Employee Full Name	Text
Employee ID	Text
Gender	Radio Button
Department	Drop-down List
Employment Type	Radio Button
Basic Salary	Number
Allowance	Number
Deduction	Number
Years of Service	Number
Employee Document	File Upload

Requirements: Include four departments (**Human Resources, Finance, Information Technology, Administration), Full-Time and Part-Time employment** options, Submit. Use POST, action="process.php", and enctype="multipart/form-data".

Task 2: PHP Functions (30 Marks)

Create functions.php containing eight functions:

Function	Requirement
calculateGrossSalary()	Basic Salary + Allowance
calculateBonus()	Calculate bonus based on basic salary
calculateServiceBenefit()	Calculate benefit based on years of service
calculateEmploymentAllowance()	Calculate allowance based on employment type
calculateTotalBenefits()	Bonus + Service Benefit + Employment Allowance
calculateNetSalary()	Gross Salary + Total Benefits − Deduction
checkSalaryStatus()	Determine High, Medium, or Low Salary
calculateAnnualSalary()	Net Salary × 12, using a default parameter

Calculation Rules

1. Bonus Calculation

Calculate the employee bonus based on their basic salary.

Basic Salary	Bonus Percentage
$1,000 or more	**10% of Basic Salary**
$500 to less than $1,000	**5% of Basic Salary**
Less than $500	**No Bonus (0%)**

2. Service Benefit Calculation

Calculate the employee service benefit based on the number of years worked.

Years of Service	Service Benefit
5 years or more	**8% of Basic Salary**
3 to less than 5 years	**5% of Basic Salary**
Less than 3 years	**No Benefit (0%)**

3. Employment Allowance Calculation

Calculate the additional employment allowance based on employment type.

Employment Type	Employment Allowance
Full-Time	**6% of Basic Salary**
Part-Time	**3% of Basic Salary**

4. Salary Status Classification

Determine the employee's salary status based on their calculated net salary.

Net Salary	Salary Status
$1,500 or more	**High Salary**
$800 to less than $1,500	**Medium Salary**
Less than $800	**Low Salary**

Use parameters, arguments, return values, conditional statements, and require_once.

Task 3: Form Processing and Validation

Create **process.php** and retrieve information using $_POST.

Apply the following rules:

1. Employee Name and ID must not be empty.
2. Gender, Department, and Employment Type must be selected.
3. Basic Salary must be greater than zero.
4. Allowance, Deduction, and Years of Service cannot be negative.
5. Years of Service must be a whole number.
6. Deduction cannot exceed Gross Salary plus Total Benefits.

7. An employee document must be selected.
8. Display appropriate error messages when validation fails.

Use isset(), empty(), and if...elseif...else where appropriate. Zero is valid for Allowance, Deduction, and Years of Service.

Task 4: Employee Document

Create an uploads folder.

1. Upload one employee document using $_FILES.
2. Retrieve the file name, size, type, and temporary location.
3. Reject documents larger than 2 MB.
4. Check duplicate filenames using file_exists().
5. Save the document using move_uploaded_file().
6. Do not overwrite existing files.
7. Display an upload success or error message.

Task 5: Display Employee Results

After successful validation and uploading, display the information in an HTML table, including:

- Employee Name, ID, Gender, Department, Employment Type, and Years of Service.
- Basic Salary, Allowance, Gross Salary, Bonus, Service Benefit, Employment Allowance, Total Benefits, Deduction, Net Salary, Salary Status, and Annual Salary.
- Uploaded Document Name, Type, Size, and Upload Status.

Add a **Back to Registration Form** link.

General Instructions

- Use HTML, CSS, and PHP only.
- Keep the HTML form, functions, and processing code separate.
- Do not use JavaScript, databases, frameworks, custom arrays, or array-processing loops.
- Add meaningful code comments.
- Use only concepts covered in Chapters 3 and 4.
- Test using XAMPP with sample employee data and documents.
